

Bio-Security Protocol and the World Jersey Tour 2026

The Foot and Mouth disease situation in South Africa has been reported on by various media outlets worldwide. Jersey SA would like to share with all interested in attending the Tour and Conference in September 2026 the steps we have taken to ensure that all people and animals are kept safe during this period:

- Jersey SA has been in communication with Dr. Sebopetsa from the Department of Agriculture. He has given us the assurance of the support of the Department of Agriculture in having the herds to be visited, being added to their vaccination program.
- Jersey SA has reached out to all State Vets and the Director of Director of Animal Health, with the letter Dr. Sebopetsa and a list of the relevant herds to be vaccinated. We can gladly confirm that there are that has already been vaccinated, and the others are being prioritized for vaccinations.
- Jersey SA will stay in constant contact with the relevant breeders to discuss herd health and the planning of all herd visits to ensure the safety of all.
- Jersey SA will also be in communication with the Department of Agriculture regarding the vaccination of neighboring herds.
- During the herd visits the following bio-security protocol will be followed at each herd visit:

**** All vehicles will be sprayed with F10 before entering the farm, and on departure from the farm.**

**** Vehicles will be kept to a minimum during the herd visits.**

**** Shoe covers will be available at each farm for visitors to wear during the visit. These covers will be disposed of before boarding the bus after each visit and destroyed.**

**** Foot baths will also be available at each point for visitors to use before putting on the shoe covers provided**

- We ask each visitor to consider packing an old pair of shoes to wear and which you would not mind discarding after the tour has ended.
